LPS Retirement: Minimizing Risk for a Secure Future

Don't compromise security and stability!

Get ready to migrate because the risks of running unsupported software can lead to security vulnerabilities and compliance issues. Here's what we can help you avoid.

Increased Threats

Running outdated operating systems and unsupported software leaves your system exposed to potential threats and attacks.

Data Breaches

Virus scan effectiveness is reduced with outdated operating systems or unsupported software, increasing the risk of data breaches and other security incidents.

Security Gaps

Without the ability to patch, update, or upgrade unsupported software on legacy operating systems, your system will remain stagnant, leaving critical security gaps.

The Loftware Team can help build a "wall" between your labeling solution and risks. For more info: loftware.com/lps-retirement

Our commitment as a partner

We want to ensure your systems remain secure and up to date. Work with us to avoid each of the risks identified above by planning your migration to a future-proof Loftware labeling solution.

Plan now

Plan now for the LPS end of support! Use this opportunity to mitigate risks and create a safer, more robust printing environment for your organization.

Determine
the best solution for your current and future labeling requirements

Provide
opportunities to modernize your labeling processes resulting in cost savings

Guide
you through migration with proven best-practices to minimize disruption

Empower
your team with comprehensive, self-placed Loftware Academy training

Support
your production labeling with industry leading global support
